"MAGE-I gene product is a cytoplasmic protein.";

Int. J. Cancer 59:432-439(1994).

-!- FUNCTION: Not known, though may play a role in embryonal development and tumor transformation or aspects of tumor progression. Antigen recognized on a melanoma by autologous cytolytic T lymphocytes.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- TISSUE SPECIFICITY: Expressed in many tumors of several types, such as melanoma, head and neck squamous cell carcinoma, lung carcinoma and breast carcinoma, but not in normal tissues except for testes. Never expressed in kidney tumors, leukemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
"Human gene MAGE-3 codes for an antigen recognized on a melanoma autologous cytolytic T lymphocytes.";
J. Exp. Med. 179:921-930(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 32 T -> A (probable polymorphism).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               J. Bacteriol. 185:2330-2337(2003).
-!- FUNCTION: The recF protein is involved in DNA metabolism; it is required for DNA replication and normal SOS inducibility. RecF binds preferentially to single-stranded, linear DNA. It also seems to bind ATP (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                     Irriger S.;

"Cyclin destruction in mitosis: a crucial task of Cdc20.";

PEBS Lett. 532:7-11(2002).

-!-FUNCTION: Activator protein, which is required for proteolytic destruction of cyclins during mitosis. Acts via its interaction with the ubiquitin ligase APC/C complex. Plays an essential role in mitosis exit by directing degradation of CLB2 cyclin. Also required for two microtubule-dependent processes, nuclear movements prior to anaphase and chromosome separation. CDC20 may modulate microtubule structure either by promoting microtubule disassembly or by altering the surface of the microtubules.

C.-!-SIMILARITY: Contains 7 WD repeats.

C.-!-CAUTION: Ref.1 sequence differs from that shown due to a frameshift in position 502.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WD 1.

                                                                                                                                                    SUBUNIT: Made up of two chains. The A chain is responsible for DNA breakage and rejoining; the B chain catalyzes ATP hydrolysis. The enzyme forms an A2B2 tetramer.
                           "Whole-genome random sequencing and assembly of Haemophilus influenzae
                                                                 -I- FUNCTION: DNA gyrame negatively supercoils closed circular double-
stranded DNA in an ATP-dependent manner and also catalyzes the
interconversion of other topological isomers of double-stranded
DNA rings, including catenanes and knotted rings.
-I- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining
of double-stranded DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=94150718; PubMed=7906398; Wilson R., Ainscough R., Anderson K., Baynes C., Berks M., Wilson R., Ainscough R., Anderson K., Coper T., Cooper J., Coulson A., Denfield J., Burton J., Connell M., Copsey T., Cooper J., Coulson A., Cratton M., Dear S., Du Z., Durbin R., Favello A., Fraser A., Fulton L., Gardner A., Green P., Hawkins T., Hillier L., Jier M., Johnston L., Jones M., Kershaw J., Kirsten J., Laisster N., Jerteille P., Lightning J., Lloyd C., Mortimore B., O'Callaghan M., Parsons J., Percy C., Rifken L., Roopra A., Saunders D., Shownken R., Sims M., Smaldon N., Smith A., Smith M., Sonnhammer E., Staden R.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -I. FUNCTION: Involved in protein export. Interacts with the secY/secE subunits. SecA has a central role in coupling the hydrolysis of ATP to the transfer of pre-secretory periplasmic and outer membrane proteins across the membrane (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Aravind L.,
